Summary

I graduated from the Engineering Physics programme of KTH Royal Institute of Technology in 2015 with an M.Sc. in Systems, Control and Robotics. The same year, I was awarded the KTH Electrical Engineering Scholarship of Excellence. In 2020, I received my Ph.D. degree from KTH by defending the thesis *Hidden Markov Models: Identification, Inverse Filtering and Applications*. I have been a visiting researcher at the California Institute of Technology (Caltech), USA, the University of British Columbia (UBC), Canada, and Cornell University, USA. My primary research interests are within inference and control of stochastic dynamical systems (e.g., hidden Markov models, Markov decision processes) as well as machine learning and optimization.

Some of the skills that I have picked up during my Ph.D. studies are:

- independent research and problem solving,
- teaching and presenting for an audience,
- written communication,
- time-management,
- critical thinking,
- algorithm implementation and evaluation,
- student (project/thesis) supervision,
- interdisciplinary collaboration.

I am interested in opportunities related to machine learning, mathematical modeling, data analytics and their future applications in real-world scenarios.
